GroupTrack 2.7c — internal testing, build b

26 October 2026 · update from the first test drive on One Map

Rel 2.7c · build b · 26 October 2026 (afternoon)

From the first test drive on One Map. One change matters to every Group rider: **re-apply your radio setup** (below).

IMPORTANT **Radios report every 30 m — re-apply your radio setup**

GroupTrack set radios to send a moving cart's position only every **100 m**. At trail speed that is one report every 15–22 seconds, and the lead cart's track was drawn as long straight lines that cut across the trail. Radios are now set to report every **30 m** (still at most every 6 seconds): every 6 seconds from about 11 mph. **Your radio keeps the old setting until it is set up again:** check in to a ride, or RADIO SETUP › Configure radio. To see what your radio holds: RADIO SETUP › Archived setups › Radio now › View PDF — *Smart minimum distance* should read 30. *26 Oct*

What it means for you: the lead track follows the trail instead of cutting corners, and other carts move smoothly on your map.

NEW **Radio setup as a PDF — set up any mesh radio by hand**

RADIO SETUP › Archived setups: tap any saved setup, or Radio now, then **View PDF** or **Email PDF**. The PDF lists the 25 values GroupTrack sets on a radio, section by section (Owner, LoRa, Device, Channel, Position, Bluetooth, Serial), in the order to enter them in the Meshtastic app. It holds the channel key — keep it private. *26 Oct*

What it means for you: a rider whose radio GroupTrack cannot set up can still join the ride.

NEW **Rides › Email last ride statistics to GroupTrack**

The last line in Rides. It opens your email app to support@grouptrack.org with the map as it is, the ride statistics, the lead track as your tablet drew it and your last recorded track. Nothing is sent until you tap Send. Statistics are kept from when GroupTrack started — send them before you close the app. *26 Oct*

What it means for you: your real rides tell us how group tracking behaves on the trail, so we

can improve it.

CHANGED **Rides menu**

Create a ride, My rides, Import a ride. Once you are checked in, **View checked-in carts / change roles** is added at the top. *26 Oct*

CHANGED **Mode is the first button on the right**

Mode (Android only / Group) now sits above GRP Awareness — choose the mode first, then connect the radio. *26 Oct*

CHANGED **Group view keeps the carts clear of the buttons**

The Group view now frames the carts and the lead track in the middle of the map, so no cart is hidden under a button. *26 Oct*

FIXED **View checked-in carts is readable on every map type**

Each cart is in a box (white text on blue on the satellite map, the reverse on TOPO and TOPO+); callsigns were unreadable before. CHANGE MY ROLE is a button. *26 Oct*

FIXED **Archived setups › Compare**

Compare now lists all 25 values GroupTrack sets as GroupTrack's own; six of them showed as "everything else". *26 Oct*

FIXED **FILTER › SELECT heading**

Routes, Tracks and Waypoints: the heading and count read across one line (they ran down the panel letter by letter). *26 Oct*

FIXED **Ride statistics and Settings**

Ride statistics counts each report once (a cart's report arrived twice, so counts were doubled and the usual gap read 0 s). Settings is titled GroupTrack Settings and shows Rel 2.7c. *26 Oct*
