

Frequently Asked Questions | Beta Testing Program

Q1. What is required for beta testing?

A beta test group needs two things:

- An individual or group willing to invest in five SenseCAP T1000-E radio devices — one per vehicle.
- At least one Android tablet in the group to run the GroupTrack application software.

Q2. Are iPads supported?

Not presently. An iOS port requires demonstrated interest and a use case that supports the extended development effort for an Apple device. If your group is iPad-based, reach out and make your case — it helps prioritize the roadmap.

Q3. Where can I purchase the hardware?

You are welcome to purchase these devices anywhere on the internet. No markup here — GroupTrack makes nothing on hardware. Amazon is recommended for delivery speed and return policy.

DEVICE	LINK
SenseCAP T1000-E Radio (~\$30 ea)	amazon.com/dp/B0DJ6KGXKB
10.1" Android Tablet (~\$70)	amazon.com/dp/B0FD9VSK2S
11" Android Tablet (~\$90)	amazon.com/dp/B0D6B7WBKW

COMPLETE GROUP PACKAGE	PER-RIDER RADIO ONLY
5 radios + 1 tablet	1 T1000-E radio per rider

Under \$100 total	Under \$50 per rider
No WiFi. No cellular. Software free for beta testers.	Must have at least one Android in the group.

Q4. What else should I know before reaching out?

A sense of humor is required. You are on the leading edge of technology and the development and support team is one person — not a cast of thousands.

Q5. How do I apply for beta testing?

Send an email and include the following:

- A description of your testing group and the riding scenarios you plan to test.
- A brief insight into your technology comfort level.
- If you already have an Android device, include the OS version. Android 14 or above preferred. Android 10 and below will not work.
