

Free Trail Navigation & Convoy Tracking for Android

Now Recruiting Beta Testers

Do you know where your riders are? GroupTrack turns most Android phones and tablets into a GPS trail navigator with offline maps. Add mesh radios and see your whole radio-equipped group on the map in near real time. No cell service required.

Your Phone/Tablet — No Radio Needed

- Offline satellite, topo, and hybrid maps — works with zero cell signal
- GPS track recording with trip mileage display
- Trail overlays — 5,700+ Utah trails on the map
- Import routes from Gaia GPS, onX, Garmin (KML/GPX)
- Works on most Android 12+ phones and tablets

Add Seeed T1000-E Radios — Enter the World of True Situational Awareness

Pick up a T1000-E mesh radio on Amazon (\$40–50) and your whole group appears on the map. Every radio-equipped rider, visible in near real time.

- Every radio-equipped rider appears on the map (max 5 second delay)
- See lead and tail vehicles, speed, gaps between riders
- 1–1.5 mile range per radio — radios mesh together to extend coverage
- No cell towers, no subscriptions, no monthly fees

Join the Beta

We're looking for SxS, UTV, ATV, dirt bike, and Jeep riders with Android devices who ride in groups and want to help shape this product. No radio required to participate.

Priority will be given to the first 50 volunteers who already own a supported Android phone or tablet.

Visit the website for details, screenshots, and to sign up:

If you already have an Android (version 12 or higher), it costs \$0 to participate in this beta and evaluate the product. The biggest benefit comes when your group commits 4 or 5 riders with radios to maximize your situational awareness!

grouptrack.org

Free • No subscription • No cell service • Plenty of group awareness
