

GroupTrack

User Manual — Version 2.5 (Cookbook Draft)

Screen-by-Screen Guide · Off-Road Convoy Tracking & Trail Navigation

May 2026 · grouptrack.org

DRAFT / VERIFY — *ROUGH-CUT DRAFT, generated May 30 from the navigation cross-reference (navigation_xref.txt: 40 screens, routing, button labels) + the V2.5 feature docs. COMPLETE-APP manual: Chapters 4–6 are CURRENT (Version 2.5); Chapters 1–3 are marked PLANNED FOR 3.0 (preview, not in this build) so users see the full scope. Authenticate 2.5 chapters against the running app; confirm button labels and navigation. Trail counts: ~49,000 trails / 591 trailheads.*

Contents

How This Manual Works

This is a cookbook, not a reference list. It follows what a user actually does: each screen is described by how you get there, what you do on it, and where its buttons take you next. The screens are grouped into the natural journeys — getting in, planning a ride, riding, managing maps and trails, and (for organizers) setting up rides and radios.

Chapters 4, 5, and 6 cover what's in your hands today (Version 2.5). Chapters 1, 2, and 3 are a preview of the connected features planned for Version 3.0 — each carries a clear banner and is not part of the current build. See The GroupTrack Roadmap (next page) for the full picture.

The 40 screens, grouped

Entry & Account: SignIn, Enrollment, EmailGate, Terms, Privacy, Subscription

Home: Dashboard, Broadcast, Profile, MyOrganizers

Rides: CreateRide, CreateEvent, MyRides, RideDetail, CompletedRides, CompletedRideDetail, SearchByArea, InviteSend, TransferRide

Maps & Trails: Convoy (live map), MapViewer (planning), MapSources, TrailSources, RouteCreate, TrackImport, Tracks, Explore

Downloads: DownloadRideConfig

Radio Setup (organizer): FieldRadio, ApplyRadio, ApplyList, ApplyListMaint, MasterCapture, MasterCaptureMaint, MasterSuccess, ArchiveRestore, ReconnectWait, WriteVerify, SettingsPanel, Settings

Preface — What GroupTrack Has Become

What began as a mission to give a single group of riders visibility and awareness of one another on a ride has grown into something larger: a community navigation and lifestyle product — that, oh by the way, also offers off-grid group-ride awareness no other product can provide.

So you can start simply. Come for a free, capable navigation tool: plan routes, carry tens of thousands of trails offline, explore places many riders will never otherwise reach. Then grow into the community — sharing the tracks you ride, the trails you rate, and the journeys you plan, and discovering what other members have found.

And the group awareness is always there. It is the feature that started it all, and it remains — quietly waiting — so that whenever your group is ready to ride together, you can ride with a level of real-time, off-grid situational awareness that exists nowhere else.

Navigation and community are the heart. Group-ride awareness is the rare gift underneath — there when you want it, never in the way when you don't.

The GroupTrack Roadmap

GroupTrack is more than a tracking app. It is an extended community bound together by tracks, trails, and a common love of riding — of reaching sights and places many people will never get to experience. The roadmap below is the story of how that community comes together, release by release.

Today (Version 2.5) — Plan like the pros, ride anywhere.

Version 2.5 brings Gaia- and onX-style planning to GroupTrack: a wide selection of trail sources, a far larger catalog of map sources, and the tools to lay out and navigate your rides offline. It also lets you submit your completed tracks for community sharing, along with a quick survey to rate the trail — the first step in turning solo rides into shared knowledge.

Next (Version 2.6) — Completing the cycle.

Version 2.6 closes the loop: your survey and your trail upload to a community section, where other riders can see a curated selection of journeys that fellow members have planned and ridden. What you discover, you can share; what others share, you can find.

The vision (Version 3.0) — A real riding community.

Version 3.0 ties it all together. Planned rides can be shared with other community members. You see new rides posted within your preferred riding radius. Follow an organizer and get invited automatically when they post new rides. See trail ratings as you review others' tracks. It becomes a true shared community — future rides, past rides, and the joy of exploring together.

How this manual is organized

Chapters 4, 5, and 6 cover what's in your hands today (Version 2.5) — the maps, trails, tracks, and tools you use on every ride.

Chapters 1, 2, and 3 are a PREVIEW of the connected community features planned for Version 3.0 — your account, your home dashboard, and shared ride planning. They carry a clear banner and are not part of the 2.5 build. Reading them shows you where GroupTrack is headed.

The layers are converging — the connected 3.0 community is becoming a natural extension of the 2.x planning and riding tools.

1. Getting In — Account & Enrollment

🌟 PLANNED FOR RELEASE 3.0 — PREVIEW

This section describes functionality coming in GroupTrack 3.0. It is NOT available in the current 2.5 build. Described in future tense and subject to change as it is built.

First-run and account screens. Most riders pass through these once.

Sign In

Reached from: App launch (first run / signed out)

What you do here: Sign in to your GroupTrack account.

Leads to: Dashboard (on success); Terms / Privacy links

Terms / Privacy

Reached from: Sign In and Settings links

What you do here: Read terms of service and privacy policy.

Leads to: Back to where you came from

Enrollment

Reached from: Dashboard / ride creation when not yet enrolled

What you do here: Complete enrollment before creating a ride. Public or private ride enrollment.

Leads to: Create Event / Create Ride once enrolled

Email Gate

Reached from: Ride creation flow

What you do here: Confirm email before proceeding to create an event.

Leads to: Create Event (Proceed); Enrollment

Subscription

Reached from: Account / organizer upgrade

What you do here: Manage the organizer subscription tier.

Leads to: Back to Dashboard / Profile

DRAFT / VERIFY — Entry-flow order and exact gating (which screen blocks until what) needs app verification — routing shows the links but not every guard condition.

2. Home Base — Dashboard

✨ PLANNED FOR RELEASE 3.0 — PREVIEW

This section describes functionality coming in GroupTrack 3.0. It is NOT available in the current 2.5 build. Described in future tense and subject to change as it is built.

Dashboard

Reached from: After sign-in (home screen)

What you do here: Your hub. Tiles/links to Rides, Explore, Tracks, Profile, Field Radio, and Create Ride.

Tap your profile to open Profile.

Leads to: Rides · Explore · Tracks · Profile · Field Radio · Create Ride · Completed Rides · Search by Area

Broadcast

Reached from: From ride/organizer flow

What you do here: Broadcast hub with quick nav: +RIDE (create a ride) and RADIO (field radio).

Leads to: Create Ride (+RIDE) · Field Radio (RADIO)

Profile

Reached from: Dashboard (tap profile)

What you do here: View and edit your rider profile.

Leads to: Back to Dashboard

My Organizers

Reached from: Profile / rides

What you do here: See organizers you ride with.

Leads to: Ride detail / organizer info

3. Planning & Managing Rides

✨ PLANNED FOR RELEASE 3.0 — PREVIEW

This section describes functionality coming in GroupTrack 3.0. It is NOT available in the current 2.5 build. Described in future tense and subject to change as it is built.

Where organizers create rides and everyone tracks the ones they're part of.

Create Ride

Reached from: Dashboard / Broadcast (+RIDE)

What you do here: Set up a new ride. Links out to Field Radio, Completed Rides (to copy from), and Search by Area.

Leads to: Field Radio · Completed Rides · Search by Area

Create Event

Reached from: Email Gate (Proceed)

What you do here: Create the event record for a ride.

Leads to: Back to ride flow

Search by Area

Reached from: Create Ride

What you do here: Find a ride area by searching a region.

Leads to: Back to Create Ride with the area set

My Rides

Reached from: Dashboard → Rides

What you do here: List of your rides.

Leads to: Ride Detail (tap a ride)

Ride Detail

Reached from: My Rides (tap a ride)

What you do here: Details for a single ride.

Leads to: Map · Invite · Transfer

Completed Rides

Reached from: Dashboard / Create Ride

What you do here: List of finished rides.

Leads to: Completed Ride Detail (tap a ride)

Completed Ride Detail

Reached from: Completed Rides (tap a ride)

What you do here: Details of a finished ride; view it on the map.

Leads to: Map (tap to open)

Invite Send

Reached from: Ride Detail

What you do here: Send ride invites. Quick nav: +RIDE, RADIO.

Leads to: Create Ride · Field Radio

Transfer Ride

Reached from: Ride Detail

What you do here: Transfer a ride to another organizer.

Leads to: Back to Ride Detail

4. Maps, Trails & Tracks (the heart of V2.5)

The two maps and everything that feeds them. This is where V2.5's big changes live — the Work with Artifacts panel, trail import, and the map source catalog.

Convoy (Live Map)

Reached from: Dashboard / active ride

What you do here: The live ride view — your group's vehicles in real time. Work with Artifacts panel (accordion) controls display of Trails/Tracks/Waypoints/Routes. Header: tile source, QUEUES, zoom readout (N · Z##).

Leads to: Map Viewer · Track Export · Track Import · Settings

Map Viewer (Planning Map)

Reached from: Convoy map / Dashboard → Explore

What you do here: Plan a ride: search, download tiles, and manage artifacts. Work with Artifacts here has full import + edit. IMPORT TRAILS → Trail Sources. QUEUES for downloads.

Leads to: Trail Sources (IMPORT TRAILS) · Track Import · Track Export

Work with Artifacts — the V2.5 centerpiece:

- Open with the accordion button. Four types (Trails/Tracks/Waypoints/Routes), each with a three-state control: OFF / ON (ALL) / SELECTED.
- SELECT/Edit opens the artifact list (scoped to the current view): checkboxes per item, Select All / Deselect All, tap a name for the detail panel.
- IMPORT TRAILS → trail source catalog. IMPORT ARTIFACTS → GPX/KML from Downloads. RESYNC TRACKS rebuilds the track index.
- Default: Trails ON, others OFF. Features display at z12+ (zoom in to see them).

DRAFT / VERIFY — Confirm the accordion button label, the three-state control labels, and that IMPORT TRAILS / IMPORT ARTIFACTS / RESYNC TRACKS read exactly as written. Detail-via-list (not map-tap) is the intended path — trail/route detail in the SELECT list.

Trail Sources

Reached from: Map Viewer → Work with Artifacts → IMPORT TRAILS

What you do here: Browse trail sources and import. Select UGRC Utah Trails → Validate/Confirm → ~49,000 trails + 591 trailheads download. Close & reopen the app, then zoom in to see them.

Leads to: Back to Map Viewer with trails imported

Map Sources

Reached from: Settings → Map Sources

What you do here: Assign any of 16 tile sources (Google, Esri, USGS, OpenTopo, OSM, Thunderforest, CartoDB) to your SAT / TOPO / TOPO+ buttons. Add custom sources by URL.

Leads to: Back to Settings

Discoverability — must be hinted

The SAT / TOPO / TOPO+ buttons look fixed but are ASSIGNABLE SLOTS reached via Settings → Map Sources. A rider won't find the 16-source catalog without being told. Call this out in onboarding and here.

Route Create

Reached from: Map Viewer (route planning)

What you do here: Create a route. (V2.5: point-to-point snap-to-trail/track is the intended method — see Route Planning design notes; freehand deferred.)

Leads to: Back to Map Viewer with route saved

DRAFT / VERIFY — Route Create is in-progress — snap-to approach. Verify current state in app before documenting steps.

Track Import

Reached from: Convoy / Map Viewer → Track Import

What you do here: Import tracks from Downloads (GPX/KML). RESYNC TRACKS rebuilds from my_tracks/.

Leads to: Back to map

Tracks / Track Export

Reached from: Convoy → Track Export

What you do here: View and export your tracks (GPX). Export to Downloads or email.

Leads to: Back to map

Explore

Reached from: Dashboard → Explore

What you do here: Explore rides/areas/trails.

Leads to: Map Viewer / ride detail

5. Offline Maps & Downloads

Download Ride Config

Reached from: Ride config / invite acceptance

What you do here: Download the map area + config for a ride you're joining.

Leads to: Map with tiles + config applied

Download queue (QUEUES button on both maps): active/queued/completed downloads with cancel controls. Hold, Resume, Cancel Entry, Cancel All (backend implemented; panel UI wiring in progress).

DRAFT / VERIFY — Map controls reportedly moved into Downloads — verify where the download/queue controls actually live now vs. the map header.

6. Radio Setup (Organizer)

The radio configuration chain — organizers apply the ride's mesh config to physical Meshtastic radios. Mirrors the Meshtastic config screens with pre-populated, read-only values; PROCEED is red/disabled until the radio is connected, green when connected.

Field Radio

Reached from: Dashboard / Broadcast (RADIO)

What you do here: Radio hub. Apply a master config or verify a write.

Leads to: Apply Master · Verify

Apply Radio

Reached from: Field Radio → Apply

What you do here: Apply config to the connected radio, screen by screen.

Leads to: Reconnect Wait (after applying)

Reconnect Wait

Reached from: Apply Radio

What you do here: Wait for the radio to reboot and reconnect after a config write.

Leads to: Next config screen / completion

Apply List / Apply List Maint

Reached from: Settings Panel

What you do here: The list of configs to apply, and its maintenance screen.

Leads to: Master Capture (capture new master)

Master Capture / Maint

Reached from: Apply List / Settings Panel

What you do here: Capture a working radio's config as the master template; maintenance of captured masters.

Leads to: Master Success

Master Success

Reached from: After Master Capture

What you do here: Confirmation the master config was captured.

Leads to: Back to Settings Panel / Apply List

Archive Restore

Reached from: Settings Panel

What you do here: Archive or restore saved configs.

Leads to: Back to Settings Panel

Write Verify

Reached from: Field Radio → Verify

What you do here: Verify the config written to the radio matches the master.

Leads to: Back to Field Radio

Settings Panel

Reached from: Settings

What you do here: Organizer config hub: routes to Capture, Apply List, Archive/Restore, and the maintenance screens.

Leads to: Master Capture · Apply List · Archive Restore · Apply List Maint · Master Capture Maint

Settings

Reached from: Convoy map / Dashboard

What you do here: App settings. Includes Map Sources (assign tile sources to SAT/TOPO/TOPO+ slots).

Leads to: Map Sources

DRAFT / VERIFY — *The radio chain is the most complex flow and the Monday rebuild target (mirror each Meshtastic config screen, pre-populated, read-only, PROCEED red → green on connect). Verify the current screen sequence against the app — this draft maps the routes but the exact step order may differ.*

Appendix — Draft Status & To-Verify

This cookbook was built from the navigation cross-reference (the code's actual routing) plus the V2.5 feature docs. To promote from DRAFT to published:

- Walk each screen in the app; confirm the exact button labels (this draft uses code labels, which may differ from display text).
- Confirm each 'Leads to' matches real navigation.
- Fill in screens marked thin (Explore, Profile, MyOrganizers, Subscription) — routing is known, on-screen detail needs a look.
- Verify the moved items: Map Sources under Settings, map controls under Downloads.
- Update Route Create once the snap-to method is built.
- Add screenshots per screen (the original V2.4 manual's cookbook style).

Built from navigation_xref.txt (40 screens) + function_universe + V2.5 feature docs. Regenerate the xref nightly (recommit_v11) to keep this current as screens change.
